

# ArriveSafe™

## Driver Risk Assessment Software

**How do you assess the risks to your company drivers?**

### What ArriveSafe gives you

- Six modules in 40 minutes to establish risk & remedial action
- Unique video interaction with rear view mirror and sound
- E-mail alert system to ensure action on high risk assessments
- Eases fleet management duties and costs
- Protects your company drivers and other road users
- Increases driver awareness
- Demonstrates compliance with Health & Safety regulations
- Reduces road accidents and injuries
- Allows you to be pro-active with driver training
- Reduces unscheduled maintenance costs

### The ArriveSafe bonus

- Captures invaluable data about your drivers
- Proves to your insurer that you are managing driver risk
- Desktop Data Centre provides comprehensive reports
- HQdataport enables driver & fleet details to be easily updated
- Web data is protected by high security Verisign encryption
- Automatically records vital data negating manual input

# ArriveSafe™

## Driver Risk Assessment Software

- ArriveSafe enables training spend to be allocated accurately to high risk drivers.
- ArriveSafe improves company driving standards and culture.
- ArriveSafe reduces the potential for road accidents.
- ArriveSafe elevates induction procedures & can be branded to your identity.

### Why assess your drivers?

Close to 1000 employees are killed and many more are injured every year in work related road traffic accidents.

Many accidents happen due to inattention and distraction as well as failure to observe the Highway Code.

Driver error causes 90% of accidents.

Protecting your drivers and other road users from your work activities is not optional. MORR - the Management of Occupational Road Risk is a mainstream health and safety issue and is embodied by the Health & Safety at Work Act 1974 and the Management of Health & Safety at Work Regulations 1993.

ArriveSafe helps you discharge your legal obligation and generate a safer driving culture, which may spill over into private driving reducing the chance of your staff being injured in a crash outside work.

ArriveSafe is a rich media programme incorporating photography and video with relevant questions to filter your drivers into a High, Medium or Low risk category.

The assessment result comes from three areas. Namely: -

- 1 The Driver profile declaration provides factual information of the drivers experience, health and knowledge.
- 2 Measured performance through the assessment modules
- 3 Integral psychometric analysis provides further evidence to support the assessment

Case studies and research have shown that managing work-related road safety results in: -

- Reduced crashes.
- Fewer lost days due to injury, ill health and stress.
- Less need for investigation, form filling and vehicles off the road for repair.
- Reduced running cost through better driving standards.
- Less chance of key employees accruing penalty points and being banned from driving.

## Benefits of ArriveSafe

ArriveSafe enables you to make informed decisions about driver training and helps identify where health and safety improvements can be made.

ArriveSafe is quick, convenient and very affordable. It enables your training budget to be used on proven high risk drivers.

ArriveSafe automatically records the risk assessment for each driver to a secure database, which provides printed reports and an e-mail alerting system to notify managers of high risk drivers.

The benefits of managing work-related road safety are considerable and far exceed the management costs. It allows a better control over such costs as wear and tear, fuel, insurance premiums, legal fees, accident repairs and claims from employees and third parties.
